

## **CRT-400 Firmware Release Notes**

**Version 5.15.01**

**11/29/2016**

- Able to store the Technician name while setting up to do a test for voltage or resistance
- During an inspection, jar bypass is permitted with a blank line in the results tables
- A default cell count of 256 and string count 1 are stored in CDF file if site template is not loaded
- User is warned if the Cellcorder starts up without the clock set
- Clamp or spike probe selection is available during testing to correct the difference in intercell readings
- Cell voltages will now be stored in csv file if below 0.5V
