

VERTIV™

# Trellis™ Real-time Infrastructure Optimization Platform

## Mobile Suite

### Release Notes

**VERSION 5.0.6, JANUARY 29, 2019**

#### Release Notes Section Outline

- 1 General Enhancements
- 2 Notes and Special Instructions

#### 1 General Enhancements

**NOTE:** These release notes cover the *Trellis*™ platform Mobile Suite version 5.0.6 application only. This version replaces version 5.0.3 in the Apple® App Store®. The *Trellis*™ platform Mobile Suite version 3.4.x application is a completely separate product also available for download from the Apple® App Store®.

Version 5.0.6 is fully under Vertiv and the official Vertiv icon is re-established. This version also corrects an issue where rotating a blade server to place in a horizontal slot would not always place on the server, and corrects another issue where rotating a server 270 degrees would not place.

#### Bug Fixes

| ISSUE # | DESCRIPTION  | NOTES |
|---------|--|-------|
| 31      | Cannot populate blades in a chassis with horizontal slots.   | Fixed |
| 22      | Rotating a server 270 degrees in catalog search results causes incorrect rack placement.   | Fixed |
| N/A     | Fixed inconsistencies with the search pane related to template edit and search modes. Image recognition and capacity search are now only disabled in template edit mode. Only the inventory search pane changes background color when in template search mode. | Fixed |

#### Version Compatibility

While this release is compatible with *Trellis*™ platform versions 4.0 and higher, this version of the *Trellis*™ platform Mobile Suite is not recommended for use with *Trellis*™ platform versions prior to 4.0 (this is due to decreased compatibility with *Trellis*™ platform version 3.4.x).

The following table shows *Trellis*™ platform compatibility with specific versions of the Mobile Suite.

| TRELLIS™ PLATFORM VERSION | COMPATIBLE WITH MOBILE SUITE 3.4.3? | COMPATIBLE WITH MOBILE SUITE 5.0? |
|---------------------------|-------------------------------------|-----------------------------------|
| 3.4.0                     | YES                                 | NO                                |
| 3.4.1                     | YES                                 | NO                                |
| 4.0 and higher            | NO                                  | YES                               |

## 2 Notes and Special Instructions

**NOTE:** The Mobile Access Key Manager application from the Apple® App Store® online store is not required to use the Mobile Suite version 5.0 with a *Trellis*™ platform version 4.0 or later server. The Mobile Access Key Manager is only required when two-way SSL is enabled in the Mobile Suite.

### Configuring Certificates with Two-Way SSL Enabled

The mobile application only requires keys to be generated on the *Trellis*™ platform server and sent to the Mobile Access Key Manager for use by the *Trellis*™ platform Mobile Suite when two-way SSL is enabled.

- New key installation instructions are under the Help feature within the Mobile Access Key Manager application.
- Server-side key creation instructions are in the *Trellis*™ platform version 4.0 API documentation ([https://\[trellis server\]/api/help/trellisrestfulapi.html#Security](https://[trellis server]/api/help/trellisrestfulapi.html#Security)) within the Security section.
